

Window & Document Objects.

DAY - 2 Task .JS (Zen Task)

Vignesh.D (FSDWD60-T)

Overview

The **window object** represents a window/tab containing a DOM document where as **document object** is property of window object that points to the DOM document loaded in that window.

- You can access a document object either using window.document property or using document object directly as window is global object.

document	window
It represents any HTML document or web page that is loaded in the browser.	It represents a browser window or frame that displays the contents of the webpage.
It is loaded inside the window.	It is the very first object that is loaded in the browser.
It is the object of window property.	It is the object of the browser.
All the tags, elements with attributes in HTML are part of the document.	Global objects, functions, and variables of JavaScript are members of the window object.
We can access the document from a window using the window.document	We can access the window from the window only. i.e. <u>window.window</u>
The document is part of BOM (browser object model) and <u>dom</u> (Document object model)	The window is part of BOM, not DOM.
Properties of document objects such as title, body, cookies, etc can also be accessed by a window like this window. <u>document.title</u>	Properties of the window object cannot be accessed by the document object.
